

Ocean Alchemists CoralCure Universal Putty Storage & Mixing Instructions

Storage Instructions

- CoralCure Universal Putty may be stored at room temperature
- Do not allow product to heat above 40°C / 104°F or separation will occur

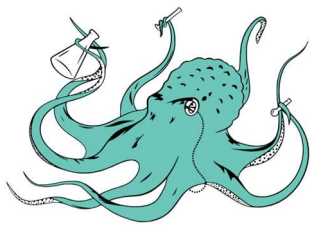

Mixing Instructions

- Measure out the amount of Universal Putty needed
- Measure out the active ingredient that is intended to be mixed into the putty
 - For Amoxicillin this will be a 1:8 ratio of Amoxicillin to putty
 - Example: for 10g of putty, weight out 1.25g of Amoxicillin

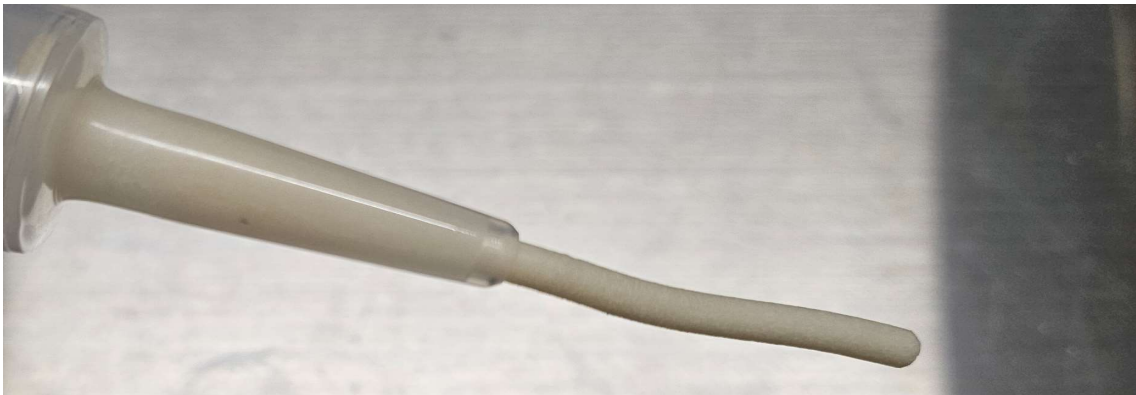

- Press the putty into the active ingredient so that some of the active ingredient sticks to the putty

Ocean Alchemists CoralCure Universal Putty Storage & Mixing Instructions

- Fold the putty over top of the active ingredient and knead the mixture between your fingers until it feels evenly dispersed throughout the putty. Repeat until all active ingredient has been incorporated. Continue to mix for an additional 3 minutes.

- Product can now be rolled into cylinder for application onto a coral. Alternatively, the product can be loaded into a syringe in order to create a more consistent diameter of application.
 - If necessary, use a small rod to poke through the tip of the syringe to the bottom of the product to remove any air in the syringe.

Application Instructions

- Apply the product along the lesion line of the disease making sure to cover all diseased tissue with a small overlap into the healthy tissue. Please note that all tissue covered will be lost to the treatment.
